

MUM-2013

Red light acne therapy is said to help in curing skin problems, possibly by clearing out clogged pores.

RedLight therapy is a treatment that uses red tinted light in order to stimulate the body's natural defense systems and bring relief from various ailments. It is based on the fact that red light helps to activate ATP or adenosine triphosphate in the muscle tissues, releasing more energy for the body to use. It is possible to employ LED red light therapy at home or undergo treatments conducted by a practitioner.

Employing the therapy is very simple which involves focusing the generated light on an area of the body that is currently experiencing some type of distress.

Hand-held Device

PCB is embedded on the flexible silicon due to which it can take human body contours therefore treatment becomes more effective.
